TMAxxxxDseries----It is a customer of Niboxing for applications that generate a set of input/output isolation for on-board power requirements. This product is widely used in pure digital circuit occasions, General low-frequency analog circuits, relay drive circuits, data exchange circuits, etc. The voltage of the input power supply is required to be relatively stable, and the input and output are required to be isolated.The accuracy of the output voltage of the power supply is not high.
